Highly motivated and experienced Backend Engineer with 5+ years of experience building scalable, high-performance systems in enterprise and high-traffic environments. Strong expertise in microservices architecture, event-driven systems, Kubernetes orchestration, and clean architecture principles. Experienced in leading backend initiatives and delivering production-ready systems in telco and financial domains.

Experience

SALT **Jakarta Barat, DKI Jakarta**
Back End Engineer | *full-time* **Jan 2021 - Present**

Telkomsel Mobile Loan

Backend Engineer – PEGASUS Squad

Developed and maintained high-availability backend services for emergency credit and data package offerings via multiple channels (*505#, SMS Blast, RoaMax international roaming).

Key Responsibilities:

- Developed scalable microservices using Java Spring Boot.
- Implemented asynchronous communication using Kafka and RabbitMQ.
- Optimized MySQL and Oracle queries for high-traffic scenarios.
- Implemented Redis caching to reduce database load during campaign spikes.
- Performed performance testing using K6.
- Contributed to CI/CD pipeline and clean architecture implementation.

Tech Stack:

Java Spring Boot, MySQL, Oracle, Kafka, RabbitMQ, Redis, Microservices, CI/CD, Clean Architecture, K6

Telkomsel Bonus Quota Injection

Backend Engineer – PEGASUS Squad

Built backend systems for automated quota bonus distribution for IMEI registration, ORBIT purchases, and campaign rewards.

Key Responsibilities:

- Designed and developed RESTful APIs using Spring Boot.
- Integrated event-driven architecture using Kafka.
- Improved system reliability and scalability for campaign-based traffic surge.
- Conducted code reviews and ensured best practices implementation.

Tech Stack:

Java Spring Boot, MySQL, Kafka, RabbitMQ, Redis, Microservices, CI/CD, Clean Architecture

Experience

SALT **Jakarta Barat, DKI Jakarta**
Back End Engineer | *full-time* **Jan 2021 - Present**

ProtekSi Kecil (T-Menu MyTelkomsel)

PIC Backend Engineer

Mini-application for monitoring and controlling children's internet access and quota usage.

Key Responsibilities:

- Designed business process flow and backend system architecture.
- Led backend team and delegated tasks while maintaining delivery timeline.
- Developed backend services using Golang with clean architecture.
- Managed PostgreSQL database design and optimization.
- Deployed and managed services in Kubernetes environment.
- Configured API Gateway using KrakeND.

Tech Stack:

Golang, PostgreSQL, Kubernetes, KrakeND, CI/CD, Clean Architecture

Telkomsel SmartPay

Backend Engineer

Developed backend services for pay-later credit package purchasing integrated with lending services.

Key Responsibilities:

- Developed microservices using Golang.
- Designed and optimized PostgreSQL schema.
- Deployed and maintained services in Kubernetes cluster.
- Ensured service reliability and secure API communication.

Tech Stack:

Golang, PostgreSQL, Kubernetes, CI/CD, Clean Architecture

Telkomsel.com Enterprise

Backend Engineer – BeOne Squad

Developed enterprise-level backend features for Telkomsel.com.

Key Responsibilities:

- Developed and maintained Drupal-based backend modules.
- Managed containerized deployments using Docker.
- Optimized MySQL queries for performance.

Tech Stack:

Drupal 8, PHP, MySQL, Docker, CI/CD

Experience

SALT **Jakarta Barat, DKI Jakarta**
Back End Engineer | *full-time* **Jan 2021 - Present**

Telkomsel DigiAds

Backend Engineer – SG Squad

Developed backend services for digiads.id platform supporting Telkomsel's digital advertising services.

Key Responsibilities:

- Developed Drupal-based backend services.
- Maintained and optimized database performance.
- Collaborated with cross-functional teams for feature delivery.

Tech Stack:

Drupal 8, PHP, MySQL, Docker

Telkomsel Patricia (patricia.co.id)

Backend Engineer

Digital IoT platform focused on device management and real-time telemetry processing.

Key Responsibilities:

- Developed scalable backend services using Golang.
- Implemented real-time communication using MQTT protocol with EMQX broker.
- Designed and optimized PostgreSQL schema for high-volume telemetry data.
- Deployed and managed containerized services in Kubernetes.
- Ensured high concurrency handling for IoT device connections.
- Optimized message throughput and database performance.

Tech Stack:

Golang, PostgreSQL, Kubernetes, EMQX, MQTT, CI/CD, Clean Architecture

SiPAJAK.com **Jakarta Utara, DKI Jakarta**
Back End Engineer | *full-time* **Jul 2020 - Dec 2020**

Developed E-Filing SPT reporting system and tax-related web platform.

Key Responsibilities:

- Developed backend services using JHipster.
- Built invoice and tax management features.
- Managed Drupal-based web modules.
- Optimized MySQL database performance.

Tech Stack:

JHipster, MySQL, Drupal 8

Education

Univesity Of Teknokrat Indonesia *Bachelor Degree in Informatics Engineering | GPA : 3,58 / 4, 00*
Bandar Lampung, Lampung
Jun 2016 - Mar 2020

- member of HIMA Informatics
- Focus Study : Backend Engineer
